--13. (Amended) A clock comprising a housing with a face, a magnifying lens that can
overlie the face, and a cover that covers the lens and face when the clock is stored and uncovers
at least the face when the clock is deployed for displaying the time, wherein:
the lens is adjacent the face when the cover covers the lens and face and is moved away
from the face in response to uncovering of the face by the cover;
further comprising a light for illuminating the face, a switch for controlling the light,
and means in circuit with, but separate from, the switch for preventing the switch from turning
the light on when the clock is stored and enabling the switch to turn the light on when the clock
is deployed.--
